

PL 18086 F1*

Excellent mid-long hybrid red pepper with wide shoulders and good leaf coverage. Excellent for greenhouse and open field cultivation. Fruits of uniform size, mainly quadrilobate, with a size of 14-16 long and 9-10 cm wide, weighing 450-500 g.

The intense red colour and smooth, thick walls make the fruits particularly attractive and ensure good shelf life. Plants are strong, with short internodes, and take advantage of good fertilization at early stage. Excellent fruit setting in different climatic conditions, making it suitable for greenhouse growing in spring-summer and overwinter cultivation. Appreciated by fresh market and processing. It has resistance to the Tomato spotted wilt virus (tswv:0) and the Tobamovirus (Tm: 0).

ADDITIONAL INFORMATION

Typology	Lamuyo 1/2 long
Colour	Red
Dimension	14-16 x 9-10 cm
Weight	450 – 500 gr
Features	Sweet
Cycle (days from transplantation)	Medium short
Vigour	Strong vigour with short internodes
Use	Greenhouse, Open Field
Strength	HR: Tm 0, IR: TSWV:0
